Aloha/Hula Assembly Instructions:

Hardware (you may have some extra):

- 12 of the large bolts for attaching the legs to the base
- 16 bolts for the cage assembly (same for dometop/flattop pieces)
- 6 bolts for feeder rings (remember, you do not need nuts - the brackets are threaded)
- 4 casters
- Lock assembly (two pieces and small bolts)

1 - Assemble the base and legs. The base has threaded inserts on the bottom - line up the legs and bolt to base.

2 - Assemble the four main panels (front, back and sides). The side panels have threaded inserts so you do not need nuts for this. Align the front panel with one side and insert bolt through front panel into insert in side panel. Repeat for all four sides. You can put the panel with the two feeders on either side. Leave the two lower bolts on the front and back panel with a little slack (you will attach the seed guards here).

3 - Attach the feeder rings to the feeder doors. The bracket on the feeder ring is threaded so again you do not need nut. Place the short stubby bolt though the outside of the feeder door and place the feeder ring on the inside - the bolts will thread right into the bracket - then insert bowls.

4 - The dometop section is composed of two pieces. You will see two bolts at the top of each side panel - the bottom of the top pieces fit over these. Then you put two bolts in through the front and back panel into the top of the dome pieces (these have threaded inserts also).

5 - The playtop section is one piece plus the two doors (the doors are removed for shipping purposes). Attach the main top piece by fitting over the fixed bolts on the top of each side panel. Then bolt the top to the main cage frame using the threaded inserts in the top. To attach the two doors, back out one of the bolts for each door (do not back out of nut). Slide hole in one end of door over the bolt that has not been backed out. Line up other hole with bolt that was backed out and re-thread bolt into hole. The posts on the doors are stops which will stop the doors once open in an upright position. Attach small perch when opening doors (this keeps the doors open).

5 - The front and rear seed guards have what looks like a keyhole in them. Fit the keyhole over the lower bolts on the front and rear panels - then tighten. The side guards then slide in to the front and rear seed guards.

6 - Casters either bolt in or slip into the inserts in the legs (depending on the style you have). They may already be attached to the legs.

7 - Grate and pan slide in on runners.

8 - Attach the door locks with the part with the rotating lever on the door.

Enjoy your new cage!
