Banyan Line Playtop (Kiki, Kokee, Koloa, Lonomea, Mahalo and Mauna Kea) Assembly Instructions:

1 - Main Assembly:

Assemble the four main panels (front, back and sides). The side panels have threaded inserts so you do not need nuts for this. Align the front panel with one side and insert bolt through front panel into insert in side panel. Repeat for all four sides. You can put the panel with the two feeders on either side.

2 - Feeders:

Attach the feeder rings to the feeder doors. The bracket on the feeder ring is threaded so again you do not need nut. Place the short stubby bolt though the outside of the feeder door and place the feeder ring on the inside - the bolts will thread right into the bracket - then insert bowls.

3 - Top:

The top section is composed of two ladders (one for Kiki) and the main perch assembly. First bolt the ladders to the main perch assembly horizontal beam (one bolt and nut for each ladder). Then bolt the ladders to the front and rear panels. Bolt the feeder rings to the main perch assembly horizontal beam - the feeder brackets are pre threaded (no nuts necessary). Top grate goes in first (sets in) and pan rests on top of the grate.

4 - Seed Guards:

You will see four clips. These are not necessary. The seed guards used to be attached with these, but now there are holes to bolts the seed guards together with (the clips would always loosen and fall off). First insert the see guard posts in the corresponding holes on the horizontal bracket - the seed guards should be placed so that the lip is down (smooth end up). Tilt the seed guards up until they meet at the corner and then bolt together (small bolts and nuts).

5 - Casters:

Casters either bolt in or slip into the inserts in the legs (depending on the style you have).

6 - Bottom grate and pan slide in on runners.

7 - Install the lock with the lever part on the door.

Enjoy your cage!
